

TABLE OF CONTENTS

1. Diacylglycerol kinases	
1.1. Diacylglycerol and phosphatidic acid	1
1.2. Diacylglycerol Kinases family: structure and tissue distribution	2
1.3. Subcellular localization: clues to function	4
2. Diacylglycerol Kinase alpha	
2.1. The immunological side	6
2.2. On the other side of Dgk α : endothelia and epithelia	8
3. Pathogenesis of cancer	
3.1. Cancer onset	10
3.2. Oncogenes and oncosuppressors	11
3.3. Dissecting the pathways toward invasion	12
3.3.1. <i>Proliferation</i>	12
3.3.2. <i>Players in cell-cell adhesion</i>	13
3.3.3. <i>Cell-substratum adhesion: receptors for the extracellular matrix</i>	13
3.3.4. <i>Migration</i>	15
3.3.5. <i>Proteolysis: an essential step for cancer cell homing in new sites</i>	15
3.3.6. <i>Angiogenesis</i>	16
3.4. Src and Met: prototypes of tyrosine kinases implicated in cancer development	16
3.5. Overview on HGF/Met signalling	18
4. Introduction to “Diacylglycerol Kinase is Required for HGF-induced Invasiveness and Anchorage-independent Growth of MDA-MB-231 Breast Cancer Cells”. By Filigheddu N, Cutrupi S, Porporato PE, Riboni F, Baldanzi G, Chianale F, Fortina E, Piantanida P, De Bortoli M, Vacca G, Graziani A, and Surico N. (2007) Anticancer Research, 27 in press.	22
5. Molecular aspects of cell migration	
5.1. The beginning of cell movement: filopodia, lamellipodia, ruffles	23
5.2. From Growth Factors to Rho GTPases: mechanisms for a regulated activation	25
5.3. Actin Cytoskeleton dynamics: downstream of Rho GTPases	26
5.4. Adhesion sites	29
6. Introduction to “Diacylglycerol Kinase-α mediates HGF-induced epithelial cell scatter by regulating Rac activation and membrane ruffling”. By Cutrupi S*, Chianale F*, Rainero E, Baldanzi G, Porporato PE, Traini S, Filigheddu N, Gnocchi VF, Santoro M, Parolini	

O, Sinigaglia F, and Graziani A. Submitted to Molecular Biology of the Cell. <u>*Equal contribution of the two Authors.</u>	31
7. Molecular determinants for Src-mediated Dgkα regulation	
7.1. Src family of non-receptor tyrosine kinases	33
7.2. Interplay between Src and cell surface receptors	34
7.3. First clues to a Src-dependent Dgk α regulation	37
8. Introduction to “Diacylglycerol Kinase-α phosphorylation by Src on Y₃₃₅ is required for activation, membrane recruitment and HGF-induced cell motility”. By Baldanzi G*, Cutrupi S*, Chianale F , Gnocchi VF, Loggia E, Notario M, Filigheddu N, van Blitterswijk WJ, Parolini O, Bussolino F, Sinigaglia F, and Graziani A. Submitted to Oncogene. *Equal contribution of the two Authors.	39
9. Concluding remarks	40
10. Introduction to “Ghrelin and Des-Acyl Ghrelin Promote Differentiation and Fusion of C2C12 Skeletal Muscle Cells”. By Filigheddu N, Gnocchi VF, Coscia M, Cappelli M, Porporato PE, Taulli R, Traini S, Baldanzi G, Chianale F, Cutrupi S, Arnoletti E, Ghè C, Fubini A, Surico N, Sinigaglia F, Ponzetto C, Muccioli G, Crepaldi T, and Graziani A. (2007) Molecular Biology of the Cell, 18: 986-994.	
10.1. From GH secretagogue peptides to Ghrelin, through GHSR	44
10.2. Expression and functions of ghrelin	45
10.3. Skeletal muscle differentiation	47
10.4. Introduction to the paper by Filigheddu <i>et al.</i> (Mol. Biol. Cell, 2007)	48
11. Introduction to “Diagnosis of juvenile hemochromatosis in an 11-year-old child combining genetic analysis and non-invasive liver iron quantitation”. By De Gobbi M, Caruso R, Daraio F, Chianale F , Pinto RM, Longo F, Piga A, and Camaschella C. (2003) European Journal of Pediatrics, 162: 96-99.	
11.1. Human iron homeostasis	49
11.2. Hereditary hemochromatosis	50
11.3. Genetic background	51
11.4. Treatment of patients with hemochromatosis	53
11.5. Presentation of the paper by De Gobbi <i>et al.</i> (Eur. J. Ped., 2004)	54
12. Bibliographic resources	55
13. I wish to thank...	61
